ENERGY TECHNOLOGY DIVISION

DataCom links people and information. It is that simple ideology that has driven our programmers and designers since 1993. Since then, we have developed into a full-fledged application/web design firm. Our design process begins by focusing on the client's requirements, and concludes when we find the most efficient way to meet those demands. What can we do for you?

DataCom is an application/web design firm.

We have over sixty years of combined experience in the oil/gas field.

DataCom helps your company:

- save money
- process and track data
- automate data entry
- increase efficiency

by implementing our customizable suite of system integration programs and tools. This package can perform the following functions:

- business analysis
- process automation
- data integration
- data conversion
- report management
- systems integration

DC Balance and Reporting

DC Balance and Reporting assists gas producers or pipeline management companies by providing a web-based interface for employees and customers to log in and view reports about their wells and/or meter connections.

Designed specifically for the oil and gas industry

View past well and meter data history

Allows for quick browsing of system volumes and well statistics

Equipped with full user authentication

DC Balance and Reporting has been upgraded to include a graphical interface that relates current well and meter data to well or meter data from past months. This information can be viewed in many graphical forms, including charts.

DC Balance and Reporting lets users view reports and graphs for well and meter connections.

DC Contract

DC Contract is an easy-to-use product that allows the user to have precise control over changing well measurement data while reducing the time it takes to calculate billing for oil and natural gas gathering operations.

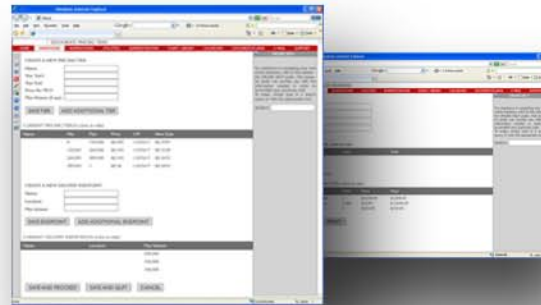

Designed specifically for the oil and gas industry

Built-in electronic contract processing

Based upon interstate commerce regulatory guidelines and oil and gas standards

Provides web-based data and reporting of measurement and pricing data

DC Contract is flexible enough to handle small contracts, yet detailed enough to support complicated pricing structures and clauses for large scale producers and pipeline deliveries.

DC Contract integrates measurement software and accounting systems.

DC BTU Calculator
determines a number of
gas attributes based upon
the latest standards.

DC BTU Calculator

DC BTU Calculator does more than a standard water vapor calculator.

- Determines btu in both wet or dry states and at variable pressures and temps
- Determines water content from sample analysis
- Estimates compressibility, relative density, and heating values
- Utilizes procedures outlined in GPA 2172-96 and ASTM D 1142-95
- Designed specifically for the oil and gas industry
- Calculates from data input regarding gas composition, temp, and pressure

DC Meter helps
measurement companies
and their technicians to
function efficiently.

DC Meter

DC Meter is a highly integrated management tool for today's measurement companies and their technicians. DC Meter facilitates the manager's role in assigning wells to field technicians and monitoring their progress. The technician will benefit from the easy-to-follow schedule and reporting system for meter inspection and calibration results.

Schedule meter inspections

Record gas component readings

Record activities performed during meter inspection

DC Royalty helps royalty owners manage their interests and information related to their interests.

DC Royalty

This software enables royalty firms or owners to efficiently manage their portfolios, giving them the functionality to track income, expenses, deeds, wells, and other important information.

Configurable for multiple accounts

Designed specifically for the oil and gas industry

Simple, easy-to-use interface

Built-in report generator

Ability to separate percentages of ownership of an interest

This latest edition of DC Royalty is the perfect tool for royalty owners, large or small.
